Vivo X Fold 6

Is this premium foldable worth spending ₹2 Lakh

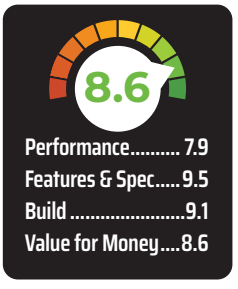

₹2,19,999

Foldable smartphones have come a long way, offering a lot more than a screen that folds in half. They have evolved into premium devices that aim to combine the convenience of a regular smartphone with the versatility of a larger display. However, with rising smartphone prices, primarily due to surging memory costs, expectations are higher than ever. The Vivo X Fold 6 enters this competitive market, where the recently launched Samsung Galaxy Z Fold 8 Ultra and Google Pixel 11 Pro Fold are also trying to get buyers' attention.

Priced at Rs 2,19,999, the Vivo X Fold 6 has a lot to prove. At this price, buyers expect much more than a premium design, reliable everyday performance, capable cameras, or battery life that can keep up with their daily routines.

So, does the Vivo X Fold 6 deliver on expectations, and can it stand out against its premium rivals? Here's my full review.

DESIGN

The Vivo X Fold 6 follows a book-style foldable design and comes in two colour options: Nebula Teal and Prism Black. I received the Prism Black colour variant for this review. Instead of a plain back panel seen on the X Fold 5, it features finely arranged vertical lines that give it a distinctive look. I also found the phone comfortable to hold, which is important for a foldable that you might use for extended periods.

The X Fold 6 features a large circular camera module on the back, which has become a familiar element on Vivo's flagships. The camera island protrudes noticeably.

When folded, the phone measures 9.4mm in thickness and weighs 228 grams. When unfolded, it is just 4.4mm thick, giving you a large screen without making the device feel too bulky. For comparison, the Samsung Galaxy Z Fold 8 Ultra measures 8.9mm when folded, 4.1mm when unfolded, and weighs 215 grams, while the Google Pixel 11 Pro Fold measures 10.1mm when folded and weighs 239 grams. This puts the Vivo between the two in thickness and weight.

The crease on the inner display is visible, particularly when viewed from certain angles. While this is common with foldables, it is something you will notice when using the larger screen.

CAMERA

Vivo's X-series smartphones have built a reputation for their camera capabilities, and the Vivo X Fold 6 aims to bring that experience to a foldable. The phone features a triple rear camera setup co-engineered with ZEISS, comprising a 200-megapixel primary camera with OIS, a 50-megapixel telephoto lens with 3x optical zoom, and a 50-megapixel ultrawide lens. For selfies and video calls, there are two 20-megapixel front cameras, one on each display.

Starting with the primary camera, the Vivo X Fold 6 captures impressive photos in daylight. Images look great, with plenty of detail, pleasing colours, and good contrast. The camera does a good job of capturing subjects without the photos looking overly processed.

Speaking of the portrait shots, the edge detection is impressive, even around fine details such as hair, helping the phone separate the subject from the background and create a natural blur.

The 50-megapixel telephoto camera is useful when you want to capture subjects from a distance without physically moving closer. With 3x optical zoom, it offers more flexibility for portraits and close-up shots. Meanwhile, the 50-megapixel ultrawide camera lets you fit more of a scene into the frame, making it useful for landscapes, architecture, and group photos.

I was impressed with the low-light photography. In night shots, the primary camera captures images with good detail while keeping the lighting balanced. Bright areas do not overpower the rest of the scene, and the camera retains a good amount of information in darker areas. This helps the images look clear and usable without making the night scene appear unnaturally bright.

The selfie cameras on the inner and cover displays make it convenient to take self-portraits regardless of whether the phone is folded or unfolded. You can also use the rear cameras for selfies by taking advantage of the cover display as a viewfinder for better selfies.
