## DISPLAY

The Vivo X Fold 6 features an 8.02-inch AMOLED inner display. The outer display is a 6.51-inch AMOLED cover display. Both displays come with a 120Hz refresh rate. They also support HDR10+, HDR Vivid, and Dolby Vision, making them well-equipped for watching content. The AMOLED panels deliver vibrant colours and deep blacks, while scrolling through apps feels smooth.

The inner display is the main attraction here. The large screen makes watching videos, reading articles, and working with multiple apps more enjoyable than on a conventional smartphone. The AMOLED panel delivers vibrant colours and good contrast, making content look appealing.

The cover display is the screen you will use for most tasks without unfolding the phone. At 6.51 inches, it is comparable in size to the display on a conventional smartphone, making it practical for messaging, browsing, replying to emails, and using apps.

Vivo claims that both displays can reach a peak brightness of 5,000 nits. While the 5,000-nit peak brightness is a claimed figure, both displays are bright enough for comfortable viewing in everyday use, even under sunlight. You can read text, browse apps, and view content outdoors without difficulty.

As I mentioned in the, the crease on the inner display is visible. However, it does not take away from the benefits of having a large foldable screen.

## VERDICT

As mentioned at the beginning, with smartphone prices climbing amid rising memory chip costs, the Vivo X Fold 6 has a lot to justify at Rs 2,19,999. And it does get several things right, including a premium design, vibrant displays, capable everyday performance, impressive cameras, and excellent battery life. Features such as Origin Workbench and Multi-Split Screen also make good use of the large inner display, giving the phone a practical edge for productivity.

The crease on the inner display remains noticeable, and benchmark results fall behind the Galaxy Z Fold 8 Ultra in our tests. While the camera system and battery endurance put the Vivo X Fold 6 in a strong light, these are areas where buyers should weigh its overall package against the competition.
