MONITORS

LG UltraGear G4

The LG UltraGear G4 is the budget pick. This 24-inch 1080p IPS panel runs at 144Hz, and it covers 99 percent of sRGB. Both G-Sync compatibility and FreeSync keep frames smooth and tear-free. At 1080p, the RTX 5060 and RX 9050 from this feature can push high frame rates

without strain, so monitor and card suit each other. Text looks a little softer at 27 inches, which is the trade for the low price. The stand only tilts, so a VESA arm helps. Use it for esports titles, first gaming rigs and everyday work.

BenQ Mobiuz EX271Q

The BenQ Mobiuz EX271Q is the sweet-spot 1440p monitor. It pairs a 27-inch IPS panel with a 180Hz refresh rate over DisplayPort and a solid 144Hz when using HDMI, a 1ms response time and AMD FreeSync Premium, plus 95 percent DCI-P3 coverage for rich colour. The HDMI caps at 144Hz as I mentioned, so for games, I would say stick to using DisplayPort for the full 180Hz. USB-C with 65W power delivery lets you charge a laptop through the same cable, and built-in speakers and a USB hub cut down desk clutter. It matches the RTX 5060 Ti 16GB and RX 9070 GRE well, since both can push 1440p at high frame rates. Use it for gaming, console play and a desk that does double duty for work.

Acer Nitro XV270K V2

The Acer Nitro XV270K V2 is the 4K gaming option in this lineup. A 27-inch IPS panel at 3840 x 2160 packs around 160 pixels per inch, so text and game detail look sharper than on a 1440p screen. Two HDMI 2.1 ports and a DisplayPort 1.4 input mean a PC and a console can share it. It makes the best partner for the Zotac RTX 5070 Ti, the card in this feature best suited to 4K, while the RX 9070 GRE can manage it with upscaling. Use it for story-driven single-player games, console gaming and creative work that benefits from the extra pixels.

Dell UltraSharp 27 Thunderbolt Hub Monitor

The Dell UltraSharp 27 Thunderbolt Hub is the productivity pick, built for people who work more than they

play. Its 27-inch 4K IPS Black panel offers a 3000:1 contrast ratio, 99 percent DCI-P3 coverage and a smooth 120Hz refresh rate. One Thunderbolt 4 cable carries video, data and up to 140W of power to a laptop, and the built-in USB hub, KVM switch and Ethernet port turn the monitor into a desk dock. It suits the Core Ultra 9 285K workstation for editing and design work. Home offices and studios suit it well. It lacks variable refresh rate, so gaming is a side job here, not the main one.

Samsung Odyssey OLED G5 (QD-OLED)

The Samsung Odyssey OLED G5 brings QD-OLED to a sensible price. Its 27-inch 1440p panel runs at 180Hz over DisplayPort with a

0.03ms response time, and every pixel switches off on its own because it is an OLED, which gives you the best of true blacks and some strong contrast. Quantum dot colour covers 99 percent of DCI-P3. Samsung adds OLED Safeguard features, such as logo and taskbar dimming, to help guard against burn-in. Pair it with the RX 9070 GRE or the RTX 5060 Ti 16GB for fast, cinematic play. The 1440p resolution keeps frame rates high on both cards. Use it for story-driven games, fast shooters and film nights, though a bright room will favour an LCD screen.
