

USB-C for digital wired playback. For a Rs 59,990 headphone, I find both omissions disappointing, particularly when the headphones are otherwise positioned as a premium listening product.

AMBIENT MODE

The Sony 1000X series is one of the leading players in noise-cancellation headphones, and The Collexion continues that legacy. It uses a 12-microphone system, the QN3 noise-cancelling processor, and its newer Integrated Processor V3. There is also an Adaptive NC Optimiser that adjusts cancellation based on factors such as fit and atmospheric pressure.

I have used it primarily indoors, on the office floor, in my room, and while travelling in cars. These Sony headphones are very good at reducing the constant hum of air conditioning, office chatter, and road noise. You can still hear some chatter if you don't play any music. Sometimes I like putting them on without any music to focus on my work. Since there is no pressure feeling, you can wear them for a long time.

When it comes to the ambient sound mode, it is natural enough for conversations and walking around. Voices and nearby sounds come through clearly without making the effect feel excessively processed. The AirPods Max 2 can enhance some ambient noises. However, this doesn't do that.

But it doesn't completely disappear in the way the AirPods Max 2's transparency feels. It is good enough that you do not need to remove the headphones every time someone speaks to you.

CLEAR CALLS

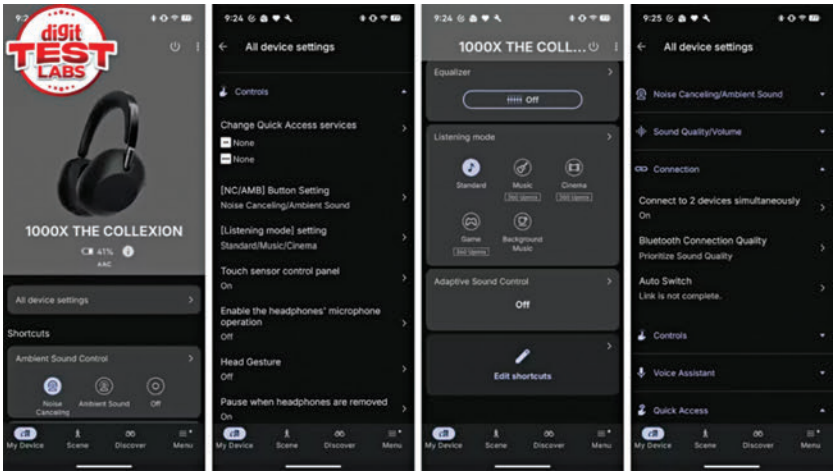

Sony uses AI beamforming and its Integrated Processor V3 to isolate the speaker's voice from background noise. The headphones also have a hardware mute function, which is useful for laptop calls and meetings. Call quality is generally clear, particularly in quieter surroundings. Background noise is suppressed, and the system handles wind effectively.

VERDICT

After spending time with The Collexion, I can see why Sony made it. The headphones sound excellent, the ANC works very well in daily use, they are comfortable for long periods, and the more premium construction makes them feel different from the usual 1000X headphones. The sound is a strong reason to consider them. The combination of deep bass, clear vocals, good separation, and a spacious presentation works across the different kinds of music I listen to.

At Rs 59,990, The Collexion is not competing only on sound quality. The ANC is excellent, the sound has plenty of weight without overwhelming vocals and instruments, and the app gives you enough control to tailor the experience. Even the battery life we got was decently longer than the company's estimates.

– G S Vasan

SPECIFICATIONS

Headphone type: Closed | Driver: 30mm | Impedance: 48 Ohm | Frequency response: 4-40000 Hz | Cord type: Single-sided (detachable) | Battery life: 24 hrs (Noise Cancellation) | Charge time: 3.5 Hrs | Bluetooth: Bluetooth 6.0 | Frequency range: 2.4 GHz
