IMT GHAZIABAD

CREATING GLOBAL IMPACT THROUGH INNOVATION AND LEADERSHIP

A visionary academician and progressive thought leader, **Dr. Atish Chattopadhyay**, Director, Institute Of Management Technology (IMT), Ghaziabad, is establishing a blueprint for role-ready and responsible career progression

As you begin your second tenure as Director of IMT Ghaziabad, what are your key priorities and focus areas for the institution's next phase of growth?

IMT is a very strong institution, backed by a distinguished alumni network, an excellent faculty, supportive and committed professional staff, and a carefully selected student cohort. Our CAT cut-off is 90 percentile and above, and we have a very strong infrastructure. Most importantly, I believe this is one of the most enabling roles one can have.

Given this strong foundation, I think going forward, our focus should be on three or four key areas.

The first is to strengthen our global footprint. IMT already had a campus in Dubai, which will now be integrated with the Ghaziabad campus. Our objective is to develop it as a branch campus of IMT Ghaziabad.

The second area of focus is our pathway programmes with partner institutions in Europe and the US. Under these programmes, students can complete part of their course at the Ghaziabad or Dubai campus and then move to a partner university campus in Europe or the US, with opportunities to pursue career placements there.

The third area of focus is technology, which is integral to our brand identity. Our aim is to harness technology for the benefit of society while ensuring that our learners understand its responsible use.

Two discoveries that transformed civilization were fire and the wheel. The third, perhaps, is Artificial Intelligence (AI), which I believe is equally significant. Academic institutions have a responsibility to prepare graduates to use AI responsibly and effectively.

The fourth area of focus is curriculum and faculty. Our goal is to develop an industry-relevant curriculum that directly connects with professional roles and equips learners to progress in their careers while becoming responsible leaders.

You have often described IMT Ghaziabad as a place that never sleeps. Could you elaborate on that, please?

I think IMT Ghaziabad is one of the most vibrant and student-friendly campuses, where students are empowered to pursue what they want to do. We have various clubs and committees, which organise programmes and activities every day, along with plenty of celebrations. Our labs, library and other facilities remain open throughout the night, and students love to celebrate when the rest of us are asleep. That is why I say IMT never sleeps!

How do you prepare students to work effectively with both people and technology from Day Zero?

We are in the midst of a very important debate about how we define intelligence. I recently wrote an article on the idea of human intelligence augmented by artificial intelligence.

I think IMT Ghaziabad's focus will be on grooming professionals who understand where AI can provide inputs and how to use those inputs while making judgement calls based on their own understanding, evaluating the findings and considering all available alternatives.

The decision will remain purely human, while the process will be a combination of human thought and technology. That is the kind of graduate we would like to groom. We believe in career progression with responsibility.

IMT Ghaziabad has a rich legacy. How do you envision building on this legacy and strengthening the institution's future under your leadership?

The director is only one among equals. The institution is essentially driven by its faculty and students, who run the show on a daily basis in consultation with the faculty. We are very clear that we want to be an institution that makes an impact not just within national boundaries but in the global context as well.

We are already accredited by AACSB (Association to Advance Collegiate Schools of Business) and are well on our way to becoming a triple-crown institution. Our presence in international rankings validates what we are doing. But more importantly, our brand ambassadors will be our graduates, alumni and faculty. We believe that their contributions to society as entrepreneurs and business leaders can make a real difference. This is one path. The second is the intellectual impact of our faculty through pedagogy and thought leadership.

Our curriculum is highly differentiated and designed to make our graduates role-ready. I believe all these factors, together, will shape IMT Ghaziabad's journey into the future.

"Our vision is to create a global impact by nurturing role-ready professionals and responsible leaders who combine human intelligence with technology to make a meaningful difference to society."

– Dr. Atish Chattopadhyay
Director, IMT Ghaziabad
