

SONY BRAVIA 9 II

7 IT'S NOT JUST A SCREEN

The new Sony BRAVIA 9 II transforms your television experience into a theatrical one—without any external speakers. It pairs Mini LED brightness with the QD-OLED colour range through True RGB backlighting, which are independently controlled red, green, and blue LEDs rather than white-plus-filter. XR Clear Image AI upscales content in real time, while XR Motion Clarity syncs the backlight to on-screen motion for sharper action. Acoustic Multi-Audio+ and a Beam Tweeter deliver room-calibrated, Dolby Atmos-ready sound, and is available in 75, 85, and 115 inches.

TRANSPARENT SPEAKER

8 SEE THROUGH THE MUSIC

From Stockholm, Transparent builds speakers that treat sound as sculpture. Encased in tempered glass and a single aluminium uniframe, every internal component is left visible — an ethos of honest, unembellished design paired with precision-tuned acoustics. Built to be modular and endlessly repairable rather than replaceable, each speaker is innovated to age gracefully as technology evolves. The result is high-fidelity audio that behaves less like a gadget and more like a considered object of Scandinavian design.

WHOOP 5.0 BAND

9 A BIG 'WHOOP'

Whoop's fifth-generation wearable ditches the screen entirely, focussing purely on recovery, strain, and sleep through 24x7 skin contact. Redesigned sensors in the Whoop 5.0 capture data 26 times a second, also delivering a 14-day battery life in a band that's 7 per cent smaller. The standout addition, though, is Healthspan with Whoop Age, an AI-driven score that quantifies biological age and "pace of aging." The medical-grade Whoop MG adds on-demand ECG and blood-pressure insights, positioning the band as a longevity tool rather than just a fitness tracker.

DYSON HUSHJET™

10 NOISELESS AIR PURIFICATION

The Dyson HushJet™ borrows its principles of noise engineering from aviation, shaping the nozzle to manage turbulence at its source. The flagship Big+Quiet Cool Pure+ Ioniser+UV technology projects purified air across multiple rooms, claiming to capture 99.999 per cent of pollutants while destroying formaldehyde and 99.9 per cent of bacteria with UV. Compact Pure Cool+ and Hot Cool Pure+ variants add personal cooling and heating to the mix. The goal is simple: serious air purification quiet enough to forget it's running.
