Keeping India running: Mobil™ on 150 years of reliability and the energy outlook ahead

As India's energy demand and industrial base grow, ExxonMobil Lubricants Pvt. Ltd. India's CEO on what more than a century of lubrication experience says about the next phase.

Ankush Khanna
Chief Executive Officer
ExxonMobil Lubricants Private Limited

India's growth is raising the stakes

India is entering a new phase of energy and industrial growth. It is expected to be the largest source of energy demand growth in the world, with demand rising by **15 exajoules by 2035,** and capital goods output grew **14.2% year on year in June 2026.** Machines are becoming faster and more precise, and that raises the stakes on everything around them. When tolerances tighten and cycle times shrink, the cost of an unplanned stoppage rises sharply. The question for industry is no longer only how much it can build, but how reliably what it builds performs, year after year.

The overlooked variable

For India's industries, the economics of operations come down to two variables: energy consumption and equipment uptime. Both are directly influenced by lubrication, and not at a single point, but across multiple critical systems running simultaneously, every day.

The evidence reinforces the point. Data from **49,000** oil samples tested by the Mobil™ Lubricant Analysis lab shows that **nearly 90% of machinery failures are linked to lubrication issues,** with contamination the single biggest contributor.* The leaders seeing the biggest gains are the ones who treat lubrication as a plant-wide reliability strategy and not as a line-item cost.

Over a century of watching equipment evolve

Mobil™'s lubrication history goes back more than 150 years, across some of the most demanding industrial applications in the world. That scale means Mobil™ has watched equipment and failure modes evolve for decades, and adapted its solutions alongside them. ExxonMobil has been part of India's industrial story for a long time, and its lubricant plant at Raigad, Maharashtra, is a nearly ₹900 crore investment. In addition, around 90% of the plant's equipment has been sourced locally.

Partnerships built into the machine

Mobil™ is a trusted partner to **thousands of industrial equipment builders worldwide,** earning **more than 35,000 OEM recommendations worldwide.** That is not a handful of partnerships concentrated in a few markets, but a genuinely global network, built over **more than 150 years** of lubrication expertise. An equipment builder only puts a lubricant recommendation alongside its own name after its own engineers have tested and validated it.

Mobil™ engages with equipment builders at the design and specification stage of a machine's development, well before a single unit reaches a customer's shop floor, so that the equipment and its lubrication strategy are aligned from the outset. For the customer, that means confidence that the fluid running in the machine is the one the builder trusts. These relationships develop gradually, through engineering validation under real operating conditions, and Mobil™ treats that trust as a responsibility to be maintained rather than a credential to simply display.

Technology that makes maintenance predictive

Maintenance is changing from reactive to predictive. Historically, much of it was scheduled on fixed intervals or triggered after something had already gone wrong. What is changing is the ability to see equipment condition and act on it before it becomes a failure, so that **manufacturers can move from reactive maintenance to a more predictive, informed way of operating. Mobil™ Lubricant Analysis** is built around this shift, helping operators make informed maintenance decisions with visibility into oil condition and equipment health.

Present where the industry meets

Industry events offer a direct window into how this collaboration works, and Mobil™'s presence at these platforms is not occasional. It is a sustained part of how Mobil™ engages with India's manufacturing and industrial ecosystem across sectors, with equipment builders, customers and operators in the same room. Mobil™ took part in **Windergy India 2026, held from 7 to 9 October at the Chennai Trade Centre** as an international trade fair and conference bringing the wind ecosystem together. Looking ahead, Mobil™ will take part in **IMTEX 2027, from 21 to 27 January 2027 in Bengaluru,** continuing those conversations with India's machine builders and manufacturers.

In summary

India's energy and industrial outlook is a story of supply and of performance. Fill with Mobil™ is not just about the product a customer chooses. It is about the expertise, collaboration and trust that come with it, built over **more than 150 years** of working alongside industries and OEMs.

Fill with Mobil™. Fill with Confidence.

** Based on 49,000 oil samples tested by MLA lab.*

Exxon Mobil Corporation has numerous affiliates, many with names that include ExxonMobil, Exxon, Esso, and Mobil. For convenience and simplicity, those terms, and references to "corporation," "company," "ExxonMobil," "EM," and other similar terms are used for convenience and may refer to one or more specific affiliates or affiliate groups.

Mobil™ at a glance

- More than **150 years** of lubrication experience, across some of the most demanding industrial applications in the world
- More than **35,000** OEM recommendations worldwide, and a trusted partner to **thousands of industrial equipment builders**
- **49,000** oil samples tested by the Mobil™ Lubricant Analysis lab*

India's energy and industry in numbers

- Energy demand is set to rise by **15 exajoules by 2035,** with India the largest source of demand growth in the world (IEA World Energy Outlook 2025)
- Capital goods output grew **14.2% year on year in June 2026** (MoSPI quick estimates)
