nance—for around 350 affluent families, uses software to maintain each family's history, track open requests, prompt follow-ups, and draft messages. Its plans run from about ₹10,000 a month to ₹1.5 lakh a month for a dedicated lifestyle manager.

"No bot talks to our families. Every message they get comes from a person," says Founder and CEO Nitin Mohan Srivastava. The company's rule, he says, is that "the human is the interface, the technology is the product". What Pinch delivers is mostly remembering: the car insurance due next week, the geyser that has started making a noise, the plumber who needs chasing. "That's the real work of running a home, and it sits in someone's head," says Srivastava. Its platform tracks every open request, reminds the manager when something is due, and flags a family that has gone quiet.

The manager's day goes to what still needs a person: reading a family, handling a difficult conversation with staff, knowing which vendor to call. "Technology is what lets one person look after more families, and do it well, without dropping anything," says Srivastava.

Radhakrishna, whose previous ventures include ride-hailing company TaxiForSure and social-media platform Koo, is pursuing a different, more ambitious model: an AI assistant intended to handle everyday tasks directly, rather than support a human concierge.

He thinks most of what human concierges sell is already within the machine's reach. "Concierge services with a human are not going to be as fast and
