reported to the UNFCCC and those independently estimated by the Emissions Database for Global Atmospheric Research (EDGAR).

Our analysis finds that populist governments report significantly less accurate emissions data, with a 25 percent increase in discrepancies compared with nonpopulist governments. This suggests that populist leaders undermine not only the quantity but also the quality of information provided to IOs.

TABLE 3.3. Information quality

	Emissions data gap (ln)		
	(1)	**(2)**	**(3)**
Populism	0.277**	0.268**	0.233*
	(0.118)	(0.121)	(0.116)
Polity2		−0.007	0.011
		(0.025)	(0.023)
Right-wing			0.122
			(0.137)
GDP per capita (ln)			−0.189
			(0.390)
IMF program			−0.054
			(0.131)
Fossil fuel (% energy consumption)			0.033*
			(0.016)
Value added by agriculture, forestry, and fishing (% GDP)			0.022
			(0.032)
Observations	936	871	790

Note: Regressions of the absolute difference (ln) between the total emissions estimate provided by Annex I Parties to the UNFCCC in a given year and the total emissions figure estimated by EDGAR (as reported in the WDI) in that same year on populism. All models include country and year fixed effects and standard errors clustered by country. Independent variables are lagged by one year. Estimated via OLS.
