Country-fixed effects	Yes	Yes	Yes	Yes
Year-fixed effects	Yes	Yes	Yes	Yes
Model type	Negative binomial	Negative binomial	Negative binomial	Negative binomial
N	2121	2121	2121	2121

Note: All independent variables except for duration and PRGF are lagged by one year. Robust standard errors are clustered at the country-level. Missing data is imputed with multiple imputation in columns 3 and 4.
***p <.01; **p <.05; *p <.1

For the World Bank, populists receive a 55 percent reduction in the number of policy areas covered by conditions, though the results for the number of conditions imposed are weaker and fail to achieve statistical significance. This discrepancy likely reflects the softer nature of World Bank conditionality (Clark and Dolan 2021), which focuses on governance and environmental reforms rather than the harsher economic measures often imposed by the IMF.

We performed extensive robustness checks to validate these findings. In these models, we accounted for selection into loan programs by utilizing an instrumental variable for IMF participation and using inverse probability weighting for World Bank loans. We also tested models with and without
