imputed data. For the IMF, we next excluded waived conditions to ensure that they did not skew results. We further employed alternative specifications using Poisson models and different combinations of covariates. In each case, our results were corroborated.[12]

Our analysis reveals that populist leaders successfully leverage their opposition to IOs to secure favorable loan terms. By threatening to withdraw from or disengage with IOs, populists compel organizations like the IMF and World Bank to reduce the burden of conditionality, preserving their participation. This dynamic underscores the strategic calculus of IOs, which often prioritize retaining members—even contentious ones—to maintain their relevance and legitimacy.

TABLE 5.2. World Bank conditionality results

	Conditions Model 1	**Categories Model 2**	**Conditions Model 3**	**Categories Model 4**
Populism	−0.221	−0.759***	0.116	−0.698***
	(0.153)	(0.194)	(0.203)	(0.189)
Duration			0.309***	0.075***
			(0.041)	(0.021)
Quota			−0.072	0.027
			(0.101)	(0.068)
PRGF			−0.197	−0.089
			(0.135)	(0.124)
Time from last IMF program			−0.125	−0.003
			(0.078)	(0.053)
Outside option member			−0.042	−0.004
			(0.030)	(0.020)
Polity2			0.001	0.001
			(0.031)	(0.016)

Note: All independent variables are lagged by one year. Robust standard errors are clustered at the country-level. Missing data is imputed with multiple imputation in columns 3 and 4.
