resources and imposing requirements based on objective needs, ensuring that assistance generates welfare-enhancing outcomes. Concessions to populist states may undermine these principles, creating perceptions of favoritism and unfairness among other members. This could erode trust in IOs and strain relationships with more cooperative member states. Additionally, by granting populists domestic victories, such as reduced economic conditions or new tangible benefits, IOs may inadvertently bolster their political standing, prolonging their influence both domestically and within the organization.

The next chapter delves into the use of secrecy by IOs to sideline populists' constituents. By limiting the flow of sensitive information to domestic audiences, IOs can reduce populists' ability to rally support against global governance. This form of sidelining complements appeasement and leader-focused sidelining, yielding a multifaceted approach to counter populist threats while maintaining the efficacy and legitimacy of international institutions.

6. Also see Clark (2024).

7. Information comes from IMF program documents.

8. Structural benchmarks and indicative targets at the IMF were excluded because of their weaker enforceability, as were nonbinding conditions at the World Bank (Clark and Dolan 2021).

9. Economic statistics come from WDI; Polity data comes from Jaggers and Gurr (1995); checks and election data come from DPI; US aid data come from the aid greenbook; UN voting data come from Bailey, Strezhnev, and Voeten (2017); conflict data come from UCDP; data on UNSC membership are hand-coded; data on domestic officials' ideology come from Nelson (2017). Data on quotas come from MONA, while data on program features come from Kentikelenis, Stubbs, and King (2016). Data on Chinese aid comes from AidData, see Dreher et al. (2022); data on colonial relationships with the country in control of the EU presidency are hand-coded; World Bank Board membership data are hand-coded; inflation data come from WDI; IMF program data come from Kentikelenis, Stubbs, and King (2016).

10. Standardization is done with the `scale` function in R, which subtracts the column mean from a given value and then divides by the column standard deviation.

11. A similar approach to missing data in the development space is taken by Schneider and Tobin (2020); as they note, "crisis countries with missing data tend to be poorer and have weaker
