opposing elites who act against the interests of ordinary people; people-centrism, where IOs prioritize ordinary citizens' needs; or sovereignty restoration, where IOs highlight how their policies respect or restore national sovereignty.

Examples of populist-style tweets include:

> *During today's #G20 debt forum I highlighted the progress on debt + transparency. As large creditors + debtors work together, the new debt process can help achieve better development outcomes in which all incomes rise, not just the incomes of the elite*, David Malpass, July 8, 2020

> *RT @IMFLive: Christine @Lagarde: Solid fiscal frameworks together with good governance and transparency give citizens confidence that fiscal policy serves the good of all, not just the wealthy or the well-connected. https://t.co/vZpeQ8gwjN#ArabFiscalForum https://t.co/avAcHInICA*, IMF, February 10, 2019

By contrast, nonpopulist tweets emphasized technical expertise and elite credentials:

> *IMF publishes agenda of global finance ministers and central bank governors' meeting in Washington, 4/20, 1:30p ET http://t.co/QnvllDwExn*, IMF, April 17, 2013

> *Top economists to exchange views on lessons from & the future of unconventional monetary policies. Blog #ARCPOLAK https://t.co/vfQkkv7zvX*, IMF, November 2, 2015

Our pre-processing pipeline involved stemming, lowercasing, and removing non-English tweets (translated via Google Translate API). We implemented a Random Forest classifier, which is robust against overfitting and effective for text classification. Out of the total dataset, approximately 10.6 percent (9,465 tweets) were classified as employing populist-style rhetoric. This rate aligns with previous research on populist rhetoric in political texts, such as campaign speeches and party manifestos.

Institutional variation exists, as the majority of populist-style tweets come from the World Bank (5,181) or World Bank officials (1,851). The IMF
