	Dependent variable					
	Likes (1)	**RTs (2)**	**Likes (3)**	**RTs (4)**	**Likes (5)**	**RTs (6)**
IO FE	✓	✓	✓	✓	✓	✓
Month–year FE	✓	✓	✓	✓	✓	✓
Topics					✓	✓
N	89426	89426	89124	89124	88791	88791

Note: Model type is OLS with IO and month–year fixed effects. Standard errors are robust. We add one to zeros and log likes and RTs before proceeding with the analysis.
***p <.01; **p <.05; *p <.1

The results, displayed in table 7.2, strongly support our hypothesis: Tweets classified as populist-style by the supervised machine learning model elicit significantly greater engagement. Specifically, populist-style tweets receive approximately 10 percent more likes than other IO tweets, and these tweets are retweeted around 12 percent more frequently.
