(FSAPs), which evaluate countries' financial health and resilience. This partnership highlights their shared commitment to global economic stability and development.

In sum, the World Bank serves as a vital player in advancing global development goals, leveraging its financial expertise, credit strength, and collaborative networks to assist nations at every stage of economic growth. With its unique blend of concessional and nonconcessional lending, the Bank remains a critical institution for fostering economic progress and addressing the world's most pressing challenges.

2.6.3 Additional IFIs

A variety of other funds and development banks exist in this space, many of which are regionally focused. For example, regional financing arrangements include the Latin American Reserve Fund, the Arab Monetary Fund, and the European Stability Mechanism. Meanwhile, regional development banks include the AIIB, Asian Development Bank, African Development Bank, and Islamic Development Bank. Table 2.2 includes a complete list of the IOs that fall into the development and emergency-lending categories.

Many of these organizations operate similarly to the World Bank and IMF, though they tend to be headquartered in the region they operate in and are led by a large regional government. They often specialize in particular areas of development; for instance, the Asian Development Bank possesses significant expertise in geothermal infrastructure projects that the World Bank and other regional IOs may lack. Their budgets and bureaucracies are relatively smaller than the Bretton Woods institutions, and they tend to attach fewer conditions to their assistance, making them attractive outside options for skeptics of the IMF and World Bank.

2.6.4 The Populist Threat for International Finance

Populist-led donor and recipient nations frequently clash with the IFIs that oversee these spaces. While recipient countries value the financial aid and technical expertise provided by institutions like the IMF and World Bank, the loans often come with strings attached in the form of explicit or implicit
