

When Iron Man ignites an enormous inferno with the terrorists' weapons cache (movie still, above), it is a scene shot in a 3D world, full of all the movement that is possible in that reality. One of the greatest challenges an artist faces is reflecting that movement within the framework of a 2D storyboard. To better accomplish this task, storyboard art employs directional arrows that indicate either camera movement or the movement of the object that is the focus of the storyboard frame. In the first frame, an arrow completely enclosed within the panel indicates the movement of Iron Man's flamethrower arm sweeping across the shot.
