

Above, Right: Mark II gack boots design (Phil Saunders)

"Gack" is design industry jargon that means to imply high levels of functioning through generic design details. Saunders' gack design provided Stark's boots a basic template for the high-tech framework underneath the armor plating.

Meanwhile, Meinerding crafted keyframe art (page 35, far right) that followed the construction of the Mark II, adding elements of heroism and humor to Stark's newfound obsession.

MEINERDING: "The boot test art helped set the tone for the scene, a moment where building the suit doesn't have to be a dry, scientific thing. It can be a romp."
