

Above, right: HUD display concepts (Kent Seki/The Orphanage)

Through his armor's Heads Up Display (HUD), Iron Man was able to interface with Jarvis and see outside the suit through radar, telemetry, and diagnostic readouts. The dynamic visuals of the HUD also allowed filmgoers a chance to climb inside the suit with Tony and share his super-hero experience. Visual Effects Supervisor JOHN NELSON headed up the development of the HUD, amalgamating the contributions of *Iron Man*'s legion of designers, compositors and pre-vis supervisors. One of those pre-vis supervisors, KENT SEKI, took a lead role in evolving Nelson's HUD concepts from its first to final stages.
