cosmologists' studies of, 10, 11
entropy associated with, 93–94
evaporation process in, 11, 89, 95, 96, 144, 151, 152
gravitational wave astronomy on, 158, 173
Hawking's evaporation calculations in, 89, 151, 152
Hawking's research on, 11
Heat Death and, 95
primordial gravitational waves and, 171
vacuum decay and, 150–53
virtual particles and, 94–95
Blekman, Freya, 183, 195–96
blueshift measurements
Big Crunch and, 62
cosmic expansion and, 55–57
Boltzmann Brains problem, 102–3, 201
bounce model of universe, 157, 169–70, 173–74
Boyle, Latham, 175
branes, in ekpyrotic models, 163, 164–69, 170, 171
braneworld, 169–70, 172
bubble universes, 170
Burke, Bernard, 25

Caldwell, Robert, 110–12, 114
Carroll, Sean, 99, 103, 200
Cepheid variable stars
discovery of, 118
distance ladder and, 118–19, 119 (fig.)
Hubble Constant calculation and, 127
CERN (European Organization for Nuclear Research), 128, 192–95, 196, 197
Chandrasekhar, Subrahmanyan, 123–24
Chandrasekhar Limit, 124–25
closed universe, 75, 76 (fig.)
CMB. *See* cosmic microwave background
cold dark matter (CDM), 179–80
Coleman, Sidney, 154
colliders. *See* particle colliders *and specific colliders*
