Compact Muon Solenoid (CMS) collaboration, 196
Concordance Model ΛCDM), 179–80, 181, 188
Conformal Cyclic Cosmology, 175, 190, 198
Copernican Principle, 18
Copernicus, Nicolaus, 19
Cosmic Dawn, 47, 48–49
cosmic expansion
  acceleration of, 76–77, 79–80, 96
  baseball-in-air analogy and, 60–61
  Big Bang start of, 5, 61
  Big Crunch possibility and, 69–70
  calculations of the age of the universe from, 71–72
  cosmological constant and, 82–83
  critical density between recollapse of universe and, 68–70
  dark energy and, 85–86, 88, 96, 97 (fig.), 109
  deceleration parameter calculations for, 72–74
  de Sitter space after, 96, 97
  discovery of, 54
  Doppler effect in detection of, 54, 55 (fig.)
  Hubble radius and, 83–86, 85 (fig.), 125
  illustration of, 53 (fig.)
  measurement of rate of, 69, 72–73, 77–81, 115
  recession speed of galaxies during, 83–84
  redshift and blueshift measurements in, 55–57, 57 (fig.), 73, 74
  role of gravity in, 61
  shape of universe types and, 75, 76 (fig.)
  slowing down of, 72–74
  supernovae distance measurement and, 125
  three possibilities for the future after, 60
cosmic inflation, 38, 179, 191, 201, 208
  age of the universe and, 71–72
  beginning of the universe and, 6, 38–39, 167
  cosmic microwave background and, 39, 41–42
  cyclic universe idea as alternative to, 173
  density fluctuations and, 40–41
  ekpyrotic models and, 169–70
  gravitational waves and, 172
