reheating process in, 42
timeline in, 42 (fig.)
uniformity problem of same temperature and, 39–40
vacuum metastability and, 154–55
cosmic microwave background (CMB), 27, 187
Big Bang beginning and, 32
Big Crunch and, 64
blackbody curve and, 28, 29 (fig.)
Conformal Cyclic Cosmology and, 175
cosmic inflation theory and, 39, 41–42
dark energy and, 187
density fluctuations in, 40
first observation of, 23–27
Hubble Constant calculation and, 126–27
interpretation of variations in, 29–31
lensing, 188
map of, 31 (fig.)
seeing “edge” of universe and, 83
study of the universe using, 27, 29
uniformity problem of same temperature and, 39–40
cosmic ray collisions
black holes and, 153
Moon study of, 132–33
public concerns about collider safety and, 132
vacuum decay and, 133
cosmological constant
dark energy and, 80–81, 90, 96, 104, 106–8, 109–10
density over time, 97 (fig.), 111 (fig.)
Einstein’s early research on, 77–78, 79
end of the universe and, 82, 96
measuring speed of cosmic expansion using, 77–81
vacuum energy miscalculation and, 80
cosmological principle, 17–18
cosmology
Hawking’s books and lectures on, 11
insight into the workings of the universe using, 8
“now” concept when viewing events in, 18–19
