distance measurement using, 116–17, 119 (fig.)
Hubble Constant calculation and, 126–27
distance measurements
apparent size of galaxies and, 86–87, 87 (fig.)
Cepheid variable stars and, 118–19, 119 (fig.)
distance ladder for, 116–17, 119 (fig.)
light-year unit for observation of events and, 16–17
parallax and, 117, 118, 119 (fig.)
standard candle method of, 73–74, 117–18, 119
supernovae explosions and, 73–74, 75, 79, 81, 84, 118–19, 124–26
domain wall, 139n
dominant energy condition, 111
Doppler effect, 54–55, 55 (fig.)
Drake Equation, 202
dwarf stars. *See* white dwarf stars
Dyson, Freeman, 103–4, 177–78, 207–8
Dyson sphere, 104n

Earth
Andromeda Galaxy–Milky Way collision and, 52
Big Rip and loss of, 113, 114 (fig.)
observable universe from vantage point of, 26 (fig.)
overview effect of astronauts' view of, 7
red giant phase of the Sun and destruction of, 1, 121
Eddington, Sir Arthur, 124
Einstein, Albert, 110
bending of space around anything that has mass and, 68, 108
cosmological constant and, 77–78, 79
theory of gravity of (General Theory of Relativity), 8, 10, 32, 66, 68, 75, 77, 78, 124, 157
ekpyrotic models
cosmos seen in, 166–69
inflation and, 169–70
introduction of, 166
observational evidence in, 171
scalar field in, 171, 174
3-dimensional branes in, 163, 164, 166, 167–69, 170, 171
