3-dimensional branes, in ekpyrotic models, 163, 164, 166, 167–69
time travel, 15
topological defect, 139n
translational symmetry, 139
Turner, Ken, 25
Turok, Neil, 166, 175, 201, 209
Type Ia supernovae explosions
  characteristic brightness and spectrum of light in, 73
  dark energy and, 125
  description of, 119–20
  distance measurement using, 73–74, 75, 79, 81, 84, 118–19, 125
  measuring speed of receding by, 74
  standard candle method of distance measurement for, 73–74, 117–18, 119

universe. *See also* observable universe
  beginning of, 2
  belief in steady state of, 4–5
  Big Bang afterglow in, 63–64
  bounce model of, 169–70, 173–74
  bubble of true vacuum in, 144–46, 146 (fig.)
  closed, 75, 76 (fig.)
  Copernican Principle on, 18
  cosmic microwave background for study of, 27, 29–31
  cosmic timeline for, 42 (fig.)
  cosmological principle in, 17–18
  cosmology's insight into the workings of the universe, 8
  cyclic. *See* cyclic universes
  dark energy and equation of state parameter for, 109
  disagreements over age calculations for, 71–72
  expansion of. *See* cosmic expansion
  flat, 75, 76 (fig.)
  imbalance between matter and antimatter in, 162
  large-scale curvature of, 75, 76 (fig.)
  light-year unit for observation of events and distance in, 16–17
  new scientific findings and new perspectives on, 7–8
  "now" concept when viewing events in, 18–19
