Praise for Brian Greene's THE FABRIC OF THE COSMOS

"As pure intellectual adventure, this is about as good as it gets. . . . Even compared with *A Brief History of Time*, Greene's book stands out for its sweeping ambition . . . stripping down the mystery from difficult concepts without watering down the science." —*Newsday*

"Greene is as elegant as ever, cutting through the fog of complexity with insight and clarity. Space and time, you might even say, become putty in his hands." —*Los Angeles Times*

"Highly informed, lucid and witty. . . . There is simply no better introduction to the strange wonders of general relativity and quantum mechanics, the fields of knowledge essential for any real understanding of space and time." —Discover

"The author's informed curiosity is inspiring and his enthusiasm infectious." —*Kansas City Star*

"Mind-bending. . . . [Greene] is both a gifted theoretical physicist and a graceful popularizer [with] virtuoso explanatory skills." —*The Oregonian*

"Brian Greene is the new Hawking, only better." — *The Times* (London)

"Greene's gravitational pull rivals a black hole's." — *Newsweek*

"Greene is an excellent teacher, humorous and quick. . . . Read [to your friends] the passages of this book that boggle your mind. (You may find yourself reading them every single paragraph.)" —*The Boston Globe*

"Inexhaustibly witty . . . a must-read for the huge constituency of lay readers enticed by the mysteries of cosmology." —The Sunday Times
