“Forbidding formulas no longer stand between general readers and the latest breakthroughs in physics: the imaginative gifts of one of the pioneers making these breakthroughs has now translated mathematical science into accessible analogies drawn from everyday life and popular culture. . . . Nonspecialists will relish this exhilarating foray into the alien terrain that is our own universe.” —*Booklist* (starred review)

“Holds out the promise that we may one day explain how space and time have come to exist.” —Nature

“Greene takes us to the limits of space and time.” — *The Guardian*

“Exciting stuff. . . . Introduces the reader to the mind-boggling landscape of cutting-edge theoretical physics, where mathematics rules supreme.”—*The News & Observer*

“One of the most entertaining and thought-provoking popular science books to have emerged in the last few years. *The Elegant Universe* was a Pulitzer Prize finalist. *The Fabric of the Cosmos* deserves to win it.”—*Physics World*

“In the space of 500 readable pages, Greene has brought us to the brink of twenty-first-century physics with the minimum of fuss.” — *The Herald*

“If anyone can popularize tough science, it’s Greene.”—*Entertainment Weekly*

“Greene is a marvelously talented exponent of physics. . . . A pleasure to read.” —Economist

“Magnificent . . . sends shivers down the spine.” — *Financial Times*

“This is popular science writing of the highest order. . . . Greene [has an] unparalleled ability to translate higher mathematics into everyday language and images, through the adept use of metaphor and analogy, and crisp, witty prose. . . . He not only makes concepts clear, but explains why they matter.” —*Publishers Weekly* (starred review)
