measures dispensed volumes and automatically corrects deviations during production by adjusting valve opening time. Closed Loop Exact Volume Regulation (CLEVR) technology provides

real-time monitoring, volume regulation, and traceability, with a browser-based interface. It targets electronics assembly, semiconductor manufacturing, automation and medical technology, improving accuracy and cutting process variation.

## TEST & MEASUREMENT

### A test platform for faster PCIe 7.0 validation

Keysight Technologies has introduced the Protocol Exerciser for PCIe 7.0 to

accelerate validation and debugging of high-speed links in AI infrastructure and data centres. It combines a protocol analyser, exerciser, test backplane, and analysis software to examine device communication, simulate traffic and identify protocol errors, from silicon bring-up through interoperability and compliance testing, helping reduce debugging time and costly redesigns.

### An optical test platform for micro-LED manufacturing

Teradyne has introduced Iris 100, an optical test platform for high-volume micro-LED manufacturing. A spectrom-

eter and high-resolution camera measure individual emitters for spectral response, brightness and uniformity, with image processing enabling parallel array testing to catch dead pixels and clustered defects early. Integrated with the UltraFLEXplus platform, it supports wafer-level and final tests for augmented reality (AR) displays and AI data-centre optical interconnects.

### A rugged RF analyser built for the field

Pico Technology has introduced the PicoVNA-R, a portable vector net-

work analyser and reflectometer for RF testing outside the lab. It measures up to 6GHz with magnitude, phase, and time-domain analysis for antennae, cables, and passive components. An onboard electronic calibrator restores calibration after power-up. The rugged, IP66-rated, USB-C-powered unit suits telecom maintenance, antenna installation, and field diagnostics.

### Modular test instrument simplifies circuit debugging

Thort Werx Pty Ltd has introduced Picotronix, a modular mixed-signal

test instrument combining oscilloscope, logic analyser, frequency meter, and waveform generator functions. Built around Raspberry Pi Pico 2 microcontrollers, it uses interchangeable picoPod modules and MicroPython programming for custom virtual instruments. An optional ADC-100 module speeds signal capture. It targets embedded development, prototyping, and education, with a Kickstarter launch being prepared.

### Test automation speeds up broadband validation

Microwave Factory has integrated its MATEOS SAR measurement soft-

ware with Rohde & Schwarz's CMX500 5G one-box signalling tester to automate RF exposure testing of long-term evolution (LTE) and 5G devices. The workflow combines cellular signalling, device control, and SPEAG's cSAR3D vector-array technology, supporting 5G SA, NSA, and LTE. It reduces manual setup and improves repeatability for manufacturers and certification labs conducting SAR compliance tests.

## MOVES

### World's first tilting electric trike

Bengaluru-based iGowise Mobility has introduced the BeiGo X4, a tilting

electric three-wheeler combining two-wheeler-style cornering with extra stability. Its patented Gen-3 gimbal-based anti-topple mechanism lets it lean into turns while keeping twin rear wheels. Features include a 72V iChargeWise architecture, dual-wheel drive, and triple-disc combined braking. The company claims a 100-km range and about 100 minutes for a full charge for urban commuting.

## MISCELLANEOUS

### AI tools for embedded development

AMD has introduced AMD Ross, an agentic AI assistant that automates

tasks across embedded hardware and software development. It connects AI agents with development tools, documentation and workflows, letting engineers use natural language for debugging, design analysis, command execution, and coding. Supporting AMD field programmable gate arrays (FPGAs), adaptive SoCs, embedded processors, and edge AI platforms, it offers MCP integration, a searchable knowledge base, and customisable agent skills.
