DIVISIO 2000 GenS – Depaneling

Optimized energy efficiency in a space-saving design.

The DIVISIO 2000 GenS delivers cost-efficient, high-quality PCB depaneling in a compact footprint. Designed for easy service access and simplified maintenance, it offers a semi-automatic setup that can be seamlessly upgraded with a robot interface for automated loading and unloading.

- 25% less energy consumption
- Up to 2x more tool holders
- Up to 25% smaller Footprint
- Up to 5x more Processing nests

Key Facts

_Maximum panel size: 460 × 360 x 4,5 mm
_Maximum PCB weight: 6 kg
_Positioning accuracy: ≤ ±0.01 mm
_Cutting accuracy: ±0.08 mm with vision system; ±0.12 mm without
_Flexible integration: Optional robot interface; existing tooling and adapters from the previous DIVISIO 2000 generation can be reused

GenS

Generation GenS – Not Just Machines. Evolution Engines.

The GenS concept: Energy and compressed air consumption have been reduced to a minimum, while throughput and repeat accuracy have been maximised. With a handling cycle time of 5 seconds and repeatability of 12.5 µm @ 6 Sigma, SERIO GenS once again sets the benchmark in the industry. Quality and durability are our top priorities.
