IN SHORT

- Cabinet approves ₹1.86 trillion Green Energy Corridor Phase III
- Tata Electronics merger could alter Tata Sons RBI status
- Mivi targets indigenous smartphone design with in-house electronics engineering
- Orbit Skyline and Lam Research launch Mohali Robotics Hub
- CCPA tightens rules for online sale of RF jammers
- LG Electronics India hit with $18.3M customs duty notice
- TVS, Bajaj And Vida Capture 62% Of Indian Electric Two-Wheeler market
- AmpereHour Energy partners with AMPT to expand DC-coupled BESS solutions
- Audi India eyes local EV production to double market share
- E-waste fraud exposes Haier, Godrej, and Blue Star
- Drive System Design expands global ICE engineering with India support
- Global Electronics Association and Fraunhofer partner on EU Chips Act pilot line
- Huawei, Qualcomm sign multi-year patent licensing deal covering 5G, AI
- Locoslab becomes Europe's first authorised Wi-SUN FAN test lab
- Honeywell Aerospace signs three-year APU deal with Garuda Indonesia
- Green Circuits expands SMT capacity by 20% with sixth production line
- Astute Group appointed franchised distributor for Samwha Capacitor Group
- Absolute EMS installs ionic contamination tester to strengthen PCBA quality checks
- Bentley invests £350 million (US$466.45 million) to build first electric car in UK

INTERNATIONAL news

Raspberry Pi profits double as H1 revenue jumps 90% on industrial demand

Raspberry Pi's first-half revenue rose 90% to US$256.9 million, while adjusted profit more than doubled to US$40.3 million, driven by industrial and OEM demand for computers used in automation, robotics and medical equipment. It has sufficient memory inventory for 2026 targets and is broadening suppliers and manufacturing capacity with Sony.

Microchip Technology expands space portfolio with VORAGO acquisition

Microchip Technology has acquired VORAGO Technologies, adding radiation-tolerant microcontrollers, microprocessors and HARDSIL technology to its aerospace and defence portfolio. VORAGO's semiconductors withstand radiation and temperatures up to 200°C, supporting space, defence and industrial applications. Financial terms were not disclosed, and Microchip expects the acquisition to have a neutral financial effect.

LG to supply integrated cockpit electronics for Renault's first commercial SDV

LG Electronics will supply an integrated cockpit platform combining instrument-cluster and infotainment functions for Renault's New Trafic E-Tech Electric, its first commercial software-defined vehicle. The system consolidates displays and simplifies electronics, while supporting computing and over-the-air updates. LG plans to expand automaker partnerships as demand for software-defined vehicle electronics grows.

DigiKey announces investment for distribution centre expansion and automation

DigiKey will invest US$100 million over 18 months to expand its Minnesota distribution centre, adding picking capacity and automated packing to support fulfilment. The company projects growth exceeding 50% in 2026 and double-digit growth the following year. It serves one million customers and stocks over 1.9 million products for same-day shipment.

Pulsiv signs manufacturing deal for high-power USB-C modules

Pulsiv has signed an exclusive manufacturing and supply agreement with Delta-Matrix for volume production of USB-C modules using its OSMIUM AC-DC technology. The module delivers 65W output and up to 73W dynamic boost, supporting continuous full-power operation for four hours. Easby Group will distribute the modules across ten markets.

Moog, Niron develop rare-earth-free defence actuators

Moog and Niron Magnetics are qualifying rare-earth-free iron nitride magnets for actuators intended for US military systems, including Army vehicles and guided munitions. The technology could reduce defence-electronics exposure to concentrated critical-mineral supply chains. Niron has produced magnets and conducted qualification since 2025, with commercial production expected within 18 months.

ICTC acquires Trinity Manufacturing to expand US cable harness capacity

Interconnect Cable Technologies Corporation has acquired Trinity Manufacturing, expanding US production capacity for cable and wire harnesses. The deal strengthens ICTC's capabilities in ground-support harnesses and electronic box builds, complementing its cable manufacturing and PCB assembly operations. The added capacity is intended to support existing and future customer requirements.

Ericsson ramps up Indian antenna output for Europe

Ericsson is expanding Indian antenna and network-component manufacturing, with plans to export locally produced equipment to international markets, including Europe. Since July 2025, its local supply chain has produced more than 15,000 antennas and 25 million network components. The equipment supports 5G Standalone networks, AI-driven management, and future programmable communications infrastructure.

Vimag Labs starts Haryana production, plans to invest ₹500 million

Vimag Labs has started manufacturing motor and control systems, including magnet-free motor technology, at its 10,000-square-foot (929sqm) Haryana facility and has exported its first production batch. The company plans to invest around ₹500 million in phases, targeting a capacity of 10,000 systems monthly and future expansion into high-power systems rated at 570 kW and above.

Copper at record $14,779/tonne; India PCB demand rising

India's printed circuit board (PCB) demand is projected to reach US$11 billion by 2030, according to the BPCA Tech Conference held alongside electronica India in Bengaluru on September 17, 2026. Meanwhile, London Metal Exchange (LME)
