

# INDIA@80: From 'Made In India' To 'Designed In India'

India has mastered scale. The next frontier is depth: globally trusted chips, design, components, and technology.

**NEETA VERMA** is an environmental compliance leader with 27+ years in the global electronics industry, specialising in regulatory strategy and product stewardship, and has been published in Quality Magazine, Industry Today and Maintenance World.

As India marked its 80th Independence Day on August 15, 2026, electronics were once again central to everyday life. Smartphones, telecom networks and electronic systems support transportation, banking, healthcare, communications, industry and critical infrastructure. Yet inside many of these products, much of the technology that determines value lies deeper: semiconductors, displays, sensors, printed circuit boards (PCBs), advanced materials, manufacturing equipment, software, design and intellectual property.

India@80 therefore raises a useful question: after building manufacturing scale, how does India build technological depth? The direction is increasingly visible. Mobile-phone manufacturing has transformed, component localisation is accelerating, semiconductor projects are moving into commercial production, chip-design capability is expanding, and initiatives are reaching into critical materials and advanced packaging.

The next electronics journey is not simply about making more products. It is about how much technology, intellectual property, and value India creates inside them.

## Scale has arrived

India's electronics transformation over the past decade has been striking. Electronics production rose from approximately ₹1.90 trillion in FY 2014-15 to ₹13.11 trillion in FY 2025-26, while electronics exports increased from about ₹382.63 billion to ₹4.24 trillion (US$47.96 billion). The momentum has continued into FY 2026-27: electronic-goods exports reached US$26.66 billion during April-August 2026, up 39.4 per cent year on year.

Mobile phones illustrate the shift. Production increased from ₹189 billion
