observational search for, 447–48
Black-hole evolution:
Hawking's area-increase theorem, 413, 413n, 416–17, 422–23, 427, 462
laws of black-hole mechanics and thermodynamics, 427, 436, 442, 445–46
Black hole, fall of objects into, 33, 291–92, 292f;
see also Accretion disk around black hole;
Accretion of gas onto black hole
Black-hole formation by stellar implosion, *see*
Implosion of star to form black hole
Black hole, gigantic:
formation of, 354–55, 396
serendipitous discovery of, 322, 326, 355
as power source for quasars and radio galaxies, 346–54; *see also* Quasars; Radio galaxies; Radio jets; Radio waves, cosmic
number of in Universe, 354
in center of our Milky Way galaxy, 354
rate of swallowing Universe's matter, 355–56
Black-hole interior:
summary of current understanding, 29–32, 36, 472–73
details of current understanding, 473–80
Oppenheimer–Snyder description of, 450–53, 452f, 473
Khalatnikov–Lifshitz claim of no singularity, and their retraction, 453–56, 455f, 459, 466–69, 473–74
singularity at center, overview of, 29–32
Penrose's theorem that hole contains singularity, 462–63
BKL (mixmaster) singularity, 468–69, 474–76, 475f
foam-like structure of singularity, 476–79, 478f, 525
aging of tidal gravity in, 479–80
speculations on travel to another universe, 456–58, 457f, 473–74, 484
see also Singularity
Black hole, names for:
Schwarzschild singularity, 121, 136–37, 244, 250, 255
frozen star, 255–56, 291
collapsed star, 256
black hole, coined by Wheeler, 256–57
Black hole, observational searches for:
by blot-out of starlight, 303
by gravitational focusing of light, 303–4, 303f
in binary star systems, 304–9, 305f, 308f, 315–19, 315f
by X-rays from gas accreting onto hole, 307–9, 307f, 308f, 309–14
using gravitational waves, 360–61, 393–96
serendipitous discovery by radio telescopes, 322, 326
no definitive signature as yet, 317–19, 360–61
signature in gravitational waves, 360–61
Black hole, predictions of and resistance to predictions:
Schwarzschild's prediction of, 131–34
Chandrasekhar's prediction of, 160
Oppenheimer-Snyder prediction of, 211–19
Einstein's rejection of, 121, 134–37, 523
Eddington's rejection of, 134–35, 161–63, 523
