Wheeler's temporary rejection of, 209–11, 21 1f, 238, 523
Wheeler's acceptance and advocacy of, 239–40, 244–45, 253
widespread resistance to, 138–39, 196–97, 219
astronomers' resistance, 196–97
Black hole, primordial, 50–51, 447–48
Black-hole properties:
overview of properties, 23–56, 258–59
circumference, 28–29, 28n
radius, 30–33
shape, 28, 51–52, 293, 293f
blots out light from stars behind it, 26, 41, 303
warpage of space, 43; *see also* Embedding diagrams
tidal gravity, 34–37
spin and swirl of space, 27–28, 50–52, 289–94, 291f, 292f, 346–48, 408f; *see also* Kerr solution
gyroscopic action, 346–48
orbits, 38–40, 52, 291–92, 292f
gravitational acceleration, 40, 43
gravitational focusing of light, 41–44, 42f, 303–4, 303f
gravitational blueshift of light, 44
electric charge and field, 286, 288–89
rotational energy, 53, 294
entropy, 423–26, 442, 445–46
atmosphere, 443–46, 444b
superradiance, 433
pulsations, 295–99
stability, 296–98
Hawking's area-increase theorem, 413, 413n, 416–17, 422–23, 427, 462
laws of black-hole mechanics and thermodynamics, 427, 436, 442, 445–46
uniqueness of, *see* "Hair" on black holes as described by membrane paradigm, 405–11, 443, 445; *see also* Membrane paradigm
see also Critical circumference; Embedding diagrams; "Hair"; Hawking radiation; Horizon; Schwarzschild geometry; Schwarzschild singularity; Singularity
Blandford-Znajek process, 53–54, 54f, 349f, 350–53, 407–9, 408f, 577N350

Chain reactions, nuclear:
concept of, 220, 222, 222b
Zel'dovich–Khariton theory of, 223
Chandrasekhar–Eddington confrontation, 158–63
Chandrasekhar limit, 151–52, 154f, 156b–57b, 161f, 175
Chaos, 362b
Chemical reactions, 183b, 339–40
Chronology protection conjecture, 521
Clocks, perfect and rubbery, 397–403, 398b, 399f
Cold, dead matter, 197–98, 200b–202b, 203n
Cold fusion, 64
Conservation laws, 284
Cosmic censorship conjecture, 36, 481, 524
Cosmic rays, 165, 173–74, 173n, 174f, 189, 192, 231, 574N239
Critical circumference:
for eighteenth-century black hole, 122, 123f, 252f
