freezing of implosion as seen from outside, 217–18, 239, 244–49, 255–56
non-freezing as seen in the star, 218, 239, 244–49
creation of singularity, 250, 251, 253–56; *see also* Singularity
like time-reversed big bang, 268–69, 268n
as proposed power source for quasars, 341
see also Hoop conjecture
Implosion of star to form neutron star, 171, 172f, 173–75; *see also* Supernovae
Inertial reference frame, 80, 96–98, 99f, 106, 109, 249
Infrared radiation, 25f
Interferometry:
principles of, 384b–85b
and Michelson–Morley experiment, 64
and radio telescopes, 329f, 330
and gravitational-wave detection, 382–84, 383f, 384b–85b; *see also* Gravitational-wave detectors; LI GO
Interval in spacetime, 90, 92, 91b–92b

Kerr solution for spinning black hole, 289–90, 294, 341–42, 359–61, 359f, 575N289

Laser, invention of, 366, 366n
Laws of physics:
nature of, 57–58, 84–86
logical meshing of, 236–37, 437–38
force the universe to behave as it does, 27, 27n, 57, 86
permitted versus compulsory predictions, 137–38, 285–86; *see also* Stability and instability
metaprinciples obeyed by, 82–83, 94
should be beautiful, 66, 79, 82, 85
domains of validity of, 38–39, 57–58, 84–86, 193, 405, 514–15, 525
see also Newtonian laws of physics; Paradigm
Length contraction due to relative motion, 65–66, 68, 71, 76, 78, 84, 130, 565N66, 565N68
Les Houches, France, physics summer school, 369–70, 426–28, 433, 434f, 580N426
Light:
as part of electromagnetic spectrum, 25f
Newton’s corpuscular description of, 122–23
Huygens’ wave description of, 123, 147b
Einstein’s wave/particle duality of, 147b
see also Absoluteness of speed of light; Maxwell’s laws of electromagnetism
LIGO:
genesis of, 381–83, 394–91
description of, 391–93
organization of, 391, 391n
Linearity, 373b, 384b–85b; *see also* Nonlinearity

Magnetic field lines:
depicted, 67f, 262, 263f
“no ends” law, 66, 67f, 79, 81–82, 85, 565N66
magnetic repulsion between, 262
gravitational attraction between, 262–65 around
an imploding star, 273–74
around a black hole, 295, 348, 349f, 350–51, 408–9
in radio sources, 338–39, 342, 348, 349f, 350–51, 408–9
