see also Electric field lines
Manhattan project, 223
Mass-energy equivalence and conversion ("$E = Mc^2$"):
details of, 172b, 441n
as consequence of principle of relativity, 82
as implying that energy curves spacetime, 488
as power source for supernovae, 173
Matricide paradox, 56, 508–9, 508n
Matterhorn project, 229
Maxwell's laws of electromagnetism, 62, 66, 67f, 71, 79, 81–82, 85, 147b, 433, 525, 565N66, 565N68
Membrane paradigm for black holes, 405–11, 443, 445
Mercury, perihelion shift of, 94, 95b, 103, 107, 116–17, 119b
Metaprinciple, 82–83, 94
Michaelson–Morley experiment, 64–66, 72–73, 78, 85, 383f, 565N64, 565N65
Microwave radiation, 25f
Mledina and Serona, tale of, 88–90
Moon:
apparent anomaly in orbital motion, 94, 567N94
as source of tides on Earth's oceans, 105, 106b, 111–12f, 362–65, 362b, 364f, 451
search for X-rays from, 311, 312f

Naked singularity, 480–82
NASA, 321, 354, 390,
National Science Foundation (NSF), 389–90
Neptune, 94
Neutron, discovery of, 169, 171
Neutron stars:
Zwicky's prediction of, 165–66
Zwicky's computations of, 207
Landau's neutron cores, 182, 182f, 184–86, 191
Oppenheimer–Volkoff–Tolman computations of, 193b–96b
Harrison–Wakano–Wheeler computations of, 198–206
formation in supernovae, 171, 172f, 173–75, 174f
minimum mass, 190–91
maximum mass, 192, 195b
maximum mass determines fates of dying stars, 176–78
observations of, *see* Pulsar
in binary system, 58, 313, 379, 393, 571N191
as source of gravitational waves, 380, 393–94, 403
see also Pulsar
Newtonian laws of physics:
nature of and applications of, 61–63
foundations of, 61–63
crumbling of foundations of, 63–72
domain of validity of, 84–85
Newton's laws of motion, 61, 81, 93, 563N61
see also Gravity, Newton's law of; Maxwell's laws of electromagnetism
Nobel prize awarded to:
Einstein, 69, 83, 103, 147b
