Chandrasekhar, 149
Landau, 187
Townes, Basov, and Prokharov, 366
Hulse and Taylor, 393
Nonlinearity:
concept of, 361, 362b–63b
of black holes' spacetime warpage, 361
see also Linearity
Novae, 166–68
Nuclear burning (fusion), *see* Fusion
Nuclear force:
concept of, 169
compared to gravitational force, 184
compared to electromagnetic force, 221b
in atomic nuclei, 170b, 183b
at high densities, 205, pressure due to, 177, 190–92, 194b–95b, 203f, 202b, 571N196
Nuclear weapons research:
American A-bomb project, 223–24
Soviet A-bomb project, 224–26
American H-bomb (super bomb) project, 226–29, 231–32
Soviet H-bomb (super bomb) project, 229–32, 233b–34b
Teller–Ulam/Sakarov–Zel'dovich secret, 241–43, 243f
relation to astrophysics research, 238–43
Nucleus, atomic, 169, 170f, 171, 183b, 221b

Oppenheimer security clearance hearings, 232, 234–35
Oppenheimer–Wheeler confrontation:
background of, 220, 223–24, 226–27, 234–35
confrontation, 209–11, 223–24, 238, 240
Orbit around gravitating body:
in science fiction scenario, 24
used to compute body's mass, 26, 561N26, 563N61
explained by Newton's laws, 61

Paradigm, 402–11, 416
concept of, 401
flat-spacetime paradigm for gravity, 401–5
curved-spacetime paradigm for gravity, 401–3
Newtonian paradigm for gravity, 403–5
membrane paradigm for black holes, 405–11, 443, 445
Pauli exclusion principle, 170b
Perturbation methods, 275, 276b, 296–98
Photoelectric effect, 147b
Photon:
and wave-particle duality, 146, 147b, 322
virtual, 439–41, 440f
spontaneous emission of, 431b
see also Gamma rays; Light; X-rays
Physical laws, *see* Laws of physics
Piezoelectric effect, 368f, 369, 372
