measuring devices; Newton, Isaac; quantum physics: and split between large and small objects
Clauser, Francis, 193–194, 223
Clauser, John, 193–197, 204–207, 207(photo), 209–211, 212, 214, 215, 249, 264
and Feynman, 223–224
Clauser-Horne-Shimony-Holt (CHSH) paper, 205
climate change, 280
Cold War, 61, 135, 179, 210
collapsed stars. *See* black holes
Commins, Gene, 195, 204, 206–207
common sense, 28
communism, 93, 94, 95, 108, 115, 138, 179, 211
complementarity, 38–41, 47, 49, 50, 69, 84, 93, 98, 101, 109, 131, 136–137, 165, 200
and USSR, 108
completeness. *See* quantum physics: as incomplete
Compton, Arthur, 28, 73
computers, 84, 247, 277. *See also* quantum computers
consciousness, 68–69, 199, 238, 281, 282, 285, 292
contextuality, 146–148, 184
Copenhagen interpretation, 9–10, 13–15, 20, 44, 47, 52, 54, 56, 61, 62, 83–84, 85, 91, 98, 103, 105, 106, 123, 130, 131, 142, 143, 176, 194, 209, 218, 222–223, 234, 239, 243, 268, 292
alternatives to, 10, 40, 106, 187–188, 283–284, 287 (*see also individual interpretations*)
appeal of, 274–277, 282
and Bell's work, 162, 264
and biases, 278
and classical concepts for measuring devices, 61–62, 67, 103, 113, 132–133, 188
and collapse of wave function, 271 (*see also* wave functions: collapse of)
contradictory versions of, 48–49, 200–201, 271, 276, 302
and decoherence, 231–232
and double-slit experiment, 100–101, 291–292
and early universe, 255
