Soviet Union, 108–109
spacetime, 25–26, 246–247, 285. *See also* relativity
Space and Time in Contemporary Physics (Schlick), 173
spectra, 22–23, 29, 34, 35. *See also* atoms: color spectra of
speed of light, 216, 247
  as speed limit in special relativity, 25, 52, 152
  traveling or signaling faster than, 111, 157, 159, 233
  See also light; locality/nonlocality; paradox: time travel paradoxes; relativity
spin (quantum), 107
spontaneous collapse theory, 235–237, 240, 241, 283, 286
  and delayed-choice thought experiment, 293
Standard Model of particle physics, 232, 261
Stanford Linear Accelerator Center (SLAC), 141
Stark, Johannes, 74
statistical physics, 27
steady-state theory, 246, 248
Stern, Alexander, 129, 131
string theory, 255–256, 261, 285
strong nuclear force, 70
Structure of Scientific Revolutions, The (Kuhn), 165–166, 182
superconductivity, 287
superdeterminism, 158–159, 286
superposition, 68, 133, 197, 202, 231, 243, 270
Sweden, 78
Szilard, Leo, 72

tachyonic antitelephone, 152. *See also* paradox: time travel paradoxes
telescopes, 7, 254, 267
Teller, Edward, 72, 79
Terletsky, Yakov, 108–109
textbooks, 82, 95, 96, 106, 123, 142, 142, 149, 176, 240, 276
Thaddeus, Patrick, 193, 195, 209
theology, 166, 168, 171
thermite reaction, 185–186
thermodynamics, 25–26, 27, 169, 187
