possible that the sun, moon and stars revolve around us, replaced the above image of the cosmos with this one:

Now the sky is all around the Earth, not just above it, and the Earth is a great stone that floats suspended in space, without falling. Soon someone (perhaps Parmenides, perhaps Pythagoras) realized that the sphere is the most reasonable shape for this flying Earth for which all directions are equal – and Aristotle devised convincing scientific arguments to confirm the spherical nature of both the Earth and of the heavens around it where celestial objects run their course. Here is the resultant image of the cosmos:
