

But this endless uniformity, in turn, is not what it seems. As I explained in the first lesson, space is not flat but curved. We have to imagine the texture of the universe, with its splashes of galaxies, being moved by waves similar to those of the sea, sometimes so agitated as to create the gaps which are black holes. So let’s return to a drawn image, in order to represent this universe furrowed by great waves:

And finally, we now know that this immense, elastic cosmos, studded with galaxies and fifteen billion years in the making, emerged from an extremely hot and dense small cloud. To represent this vision we no longer need to draw the universe but to draw its entire history. Here it is, diagrammatically:
