Agency, CAA. When Feldman asked what movies she was working on, she described her collaboration with me, and our vision for a sci-fi movie with real science woven in from the outset—our dream for *Interstellar*. Feldman got excited. He thought Spielberg might be interested and urged Lynda to send him a treatment *that very day!* (A "treatment" is a description of the story and characters, usually twenty pages or longer.)

All we had in writing were a few e-mail exchanges and notes from a few dinner conversations. So we worked at whirlwind speed for a couple of days to craft an eight-paged treatment we were proud of, and sent it off. A few days later Lynda e-mailed me: "Spielberg has read it and is very interested. We may need to have a little meeting with him. Game? XX Lynda."

Of course I was game! But a week later, before any meeting could be arranged, Lynda phoned: "Spielberg is signing on to direct our *Interstellar!*" Lynda was ecstatic. I was ecstatic. "This kind of thing never happens in Hollywood," she told me. "Never." But it did.

I then confessed to Lynda that I had seen only one Spielberg movie in my life—*ET*, of course. (As an adult, I had never been all that interested in movies.) So she gave me a homework assignment: Spielberg Movies Kip Must Watch.

A month later, on March 27, 2006, we had our first meeting with Spielberg—or Steven, as I began to call him. We met in a homey conference room in the heart of his movie production company Amblin, in Burbank.

At our meeting, I suggested to Steven and Lynda two guidelines for the science of *Interstellar*:

1. Nothing in the film will violate firmly established laws of physics, or our firmly established knowledge of the universe.
