The resulting wormhole is the one at the top of Figure 15.2. And in *Interstellar*, after the Double Negative team had created for its far side a galaxy with beautiful nebulae, dust lanes, and star fields, it is marvelous to behold (Figure 15.5). To me it is one of the movie's grandest sights.

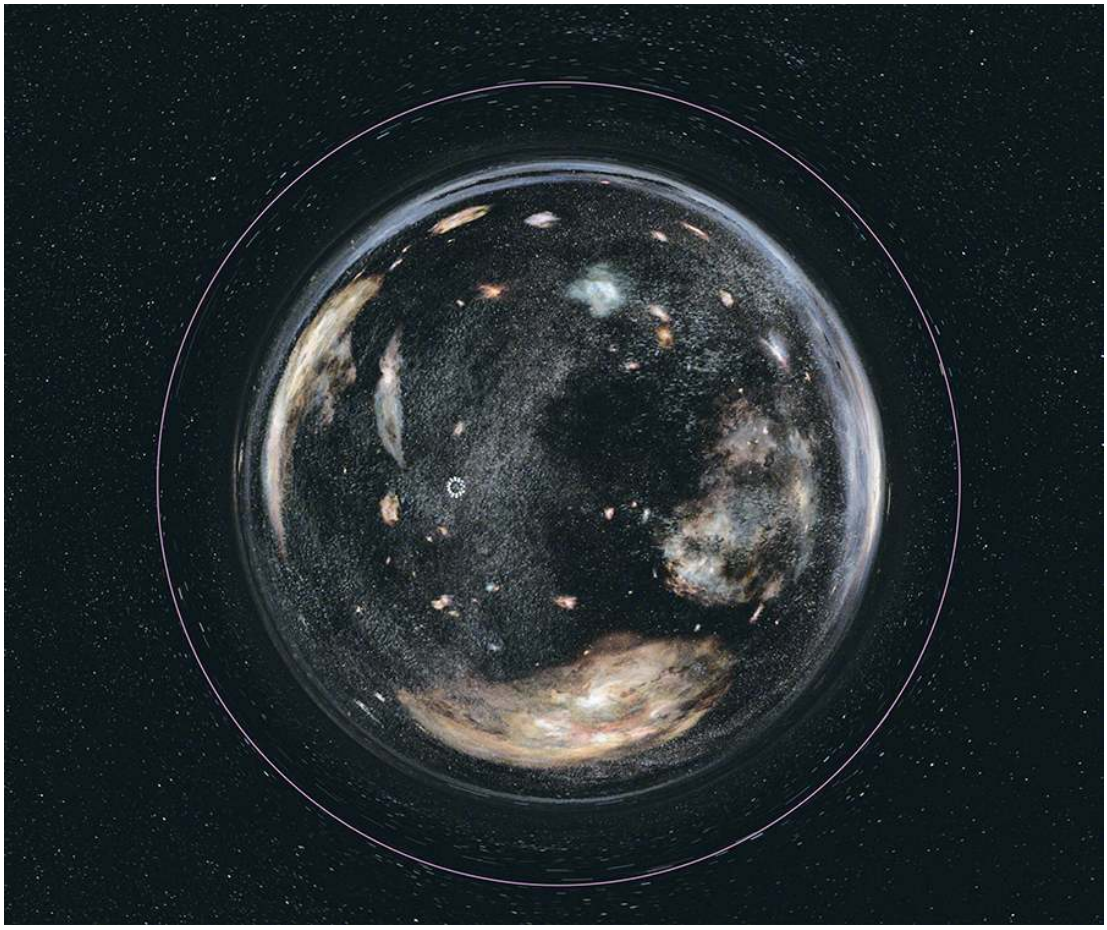

Fig. 15.5. The wormhole as seen in a trailer for *Interstellar*. The *Endurance* is in front of the wormhole, near the center. Around the wormhole in pink I have drawn the Einstein ring, like that in Figure 8.4 for a nonspinning black hole. Primary and secondary images of gravitationally lensed stars move in the same way here as there. Looking at the trailer, can you identify some and trace their motion? *[From* Interstellar*, used courtesy of Warner Bros. Entertainment Inc.]*

The Trip Through the Wormhole
