colonies somewhat like the one we see at the end of *Interstellar*. His study, augmented by a NASA study that he led, resulted in a remarkable book, *The High Frontier: Human Colonies in Space* (O'Neill 1978), which I highly recommend. But do pay attention to the book's introduction by Freeman Dyson, which discusses why O'Neill's dream of space colonies in his lifetime was shattered, but envisions them in the more distant future.

---

59 Stated more precisely and more technically, he has his camera fall into the maximally extended Schwarzschild solution or Reissner-Nordstrom solution of Einstein's equations instead of into a black hole.
