black holes:
introduced, 21–22
observational evidence for, 51–53
observed at the centers of galaxies, 19
observed at center of Milky Way galaxy, 51–53
observed at center of the Andromeda galaxy, 19–20, 70
number in our Milky Way galaxy, 53
how they are born, 22
properties predicted by Einstein's relativistic laws, 51
all properties determined by mass and spin, 57
maximum possible spin rate, 59–62
made from warped spacetime, 22, 45–49
warping of space around, 45–49
slowing of time near, 35, 47–49; *see also* event horizon
whirl of space near, 48–50, 60–61, 77, 80–82, 91–92, 97, 149, 163–164, 175, 193, 247, 284, 295
circumference proportional to mass, 22
radius of black hole, defined, 59
appearance as seen from the bulk, 40–41, 46–49, *49*
appearance as seen inside our universe—shadow and gravitational lensing, 12, 50–51, *50*, 75–84, *75*, *79*, *81*; *see also* Gargantua, *Interstellar*'s black hole; gravitational lensing by black holes
vibrations of, 170–173, 284
typical orbits around, *72*, *101*, 280
orbital navigation near, 71–72
zoom-whirl orbit, 121
tidal gravity of, 41–42, 44
tidal gravity tears apart stars, 148–149
environment near, is lethal, 100–102, 281
intermediate-mass black hole, *see* IMBH
small black hole spiraling into a large black hole, *186*
collision and merger of two black holes, 151–152, 154–155, *151*, *155*
Schwarzschild and Kerr metrics for, 51
Paczynski-Wiita approximate description of black hole's gravity, 296–297
some black-hole formulas, 292–293
references on, 279
see also accretion disks around black holes; critical orbit around a black hole; event horizon; Gargantua, *Interstellar*'s black hole; gravitational lensing by black holes; jets from black holes; singularities inside black holes
blackboards, Professor Brand's, 14, 32, *33*, 192, 201, 212–213, *220*, 221, 274, 286, 295–296
Blandford-Znajek effect, 91–92
