tidal gravity and gravitational anomalies due to, 215, *215*
Professor Brand's suspicion that bulk fields control strength of gravity, 217, 286
may hold *Interstellar*'s wormhole open, 218
may protect our brane from collision with confining branes, 219
embodied in Professor Brand's equation, 220–222, 295–296
see also Professor Brand's equation

carbon cycle, 281–282
Cassini space mission (NASA), 72–74
centrifugal forces:
and angular momentum, 101
protect objects from falling into black holes, 67, 101
and stability of orbits, 162, *162*, 241–242, *241*
and the critical orbit (volcano's rim), 121, 239–242, 244–245
near a spinning black hole: influence of space whirl, 164
confining gravity in the bulk, *see* bulk
critical orbit around a black hole, 60, 62–64, 121–122, 239–245, 247, 249
volcano analogy, 239–241, *239*, *241*, 296–297
explanation in terms of gravitational energy, centrifugal energy, and radial kinetic energy, 240–241
explanation in terms of centrifugal and gravitational forces, 241–242, *241*
instability of critical orbit, 242
zoom-whirl orbit, relies on critical orbit, 121–122, *121*
black-hole binary for interstellar travel uses critical orbit, 121–122, *121*
in *Interstellar*:
Cooper navigates onto, 237–238, *238*
Endurance's near catastrophe on, 242–243
ejection of TARS and Cooper into Gargantua from, 242–244, *243*
Endurance launch toward Edmunds' planet from, 244–245, *244*, *245*
disks, *see* accretion disks
Disney movie *The Black Hole*, 50, 250
Double Negative visual effects, 10, *31*, *50*, *75*, *81*, 83, 85, *96*, *97*, 98, 138, 139, 144, 145, 171, 288, 293
dynamical friction, 70

Earth:
place in universe, Milky Way, and solar system, 19, 21, *21*, *71*
mapping of by explorers, 27–28, *28*
magnetic field of, 23–24, *24*
Aurora Borealis (Northern Lights), 24–25, *24*
gravitational force lines of, 26, *26*
