Now armed with a basic understanding of the universe, fields, warped time and space and especially black holes, we are ready, at last, to explore *Interstellar*'s Gargantua.

---

12 If it is possible to go backward in time, you can only do so by traveling outward in space and then returning to your starting point before you left. You *cannot* go backward in time at some fixed location, while watching others go forward in time there. More on this in Chapter 30.
