not a robot, albeit a very complicated one? I have discussed all this in *The Extended Phenotype*, pp. 15–17.

The error has been compounded by yet another telling 'mutation'. Just as it seemed theologically necessary that Jesus should have been born of a virgin, so it seems demonologically necessary that any 'genetic determinist' worth his salt must believe that genes 'control' every aspect of our behaviour. I wrote of the genetic replicators: 'they created us, body and mind' (p. 25). This has been duly misquoted (e.g. in *Not in Our Genes* by Rose, Kamin, and Lewontin (p. 287), and previously in a scholarly paper by Lewontin) as '[they] *control* us, body and mind' (emphasis mine). In the context of my chapter, I think it is obvious what I meant by 'created', and it is very different from 'control'. Anybody can see that, as a matter of fact, genes do not control their creations in the strong sense criticized as 'determinism'. We effortlessly (well, fairly effortlessly) defy them every time we use contraception.
