Tegmark, Max, 207
thermodynamics, 158, 279, 297
Thomson, J. J., 45
Thorn, Charles, 302
Thorne, Kip, 111
thought experiment
  Einstein-Podolsky-Rosen (EPR), 96–102, 109, 191, 233, 285
  ideal world of, 260–261
  Schrödinger's Cat, 241–245
time. *See* space and time
tin oxide, 44–45
two-qubit system, 95–96
ultraviolet catastrophe, 50
uncertainty principle (Heisenberg)
  Bohmian mechanics and, 195–196
  description of, 70–73, 83
  Einstein on, 91, 109
  empty space and, 260
  locality and, 240
  quantum states and, 73–74, 89
  spin outcomes and, 87–89, 101
unified "you," 138–139
universal wave function, 113–114, 118–119
Universe Splitter, 205–206
utilitarianism, no-nonsense, 211
utility, 210–212

vacuum energy
  cosmic acceleration and, 257
  cosmological constant problem, 258–259
  of empty space, 256–257
  entanglement and, 262–265
  gravitational influence of, 256–257
  measuring, 50–51, 256
  negative, 304
  positive, 304
  size of, 257–258
vacuum state
  area and, 284
  empty space in, 278
  entropy in, 279
  entropy proportional to boundary area, 299–300
  in quantum field theory, 254, 256–257, 260, 264
Vaidman, Lev, 140
Van Raamsdonk, Mark, 303–304
vector fields
  electric field as, 47–48
  magnetic field as, 47
vectors, 84, 86–88, 131
velocity
